Your Name _____

Period _____

Company Name _____ Ticker Symbol _____

Net Sales

,

Directions Enter the year in this row ->				
1. Enter the net sales amount here Ex. \$51,557				
2. Subtract this years sales from next years Ex. \$53,223 <u>-\$51,557</u> =\$1,666				
3. Divide the above number by this years sales (this figures the percentage) Ex. $\frac{1,666}{51,557}$ = .03				
4. Convert decimal to percentage .03=3% growth				

*****Average sales growth for a company should be 5% or more. If yours is consistently less than 5%, this is probably not a good company for you.
